"CASE STUDY"

Regency Jewellers

Regency Jewellers, a pawn brokers situated in Leamington Spa, has taken advantage of the no capital payment when having the shop premises secured with a **MonitoredShop** security system.

Paul Cockell, the business owner, said *"Although we do not leave any valuables on site over night it is better to be safe than sorry, just having the title of Jewellers makes us a prime target for villains"*

The system configuration includes a variety of contacts and movement sensors which not only covers the entire shop area but also isolates it from access from other parts of the building.

John Airey, a watch maker that works alongside Paul said *"the system is very good and the audio response is very quick, I accidently pressed the Lone Worker button and a voice came through the system in seconds; it's exactly what we need to keep us feeling safe"*.

Paul is so impressed with the system that he has recently commissioned an installation in to his home; when we asked Paul for a quote that we could use he simply stated *"If I didn't think the system was excellent I wouldn't be getting one at home!"*

If, like Paul & John, you believe you'd benefit from a **MonitoredShop** security system and the lone worker facility it provides please contact us at the number above or click www.bcru.org/applynow.php

MonitoredShop

The Security System

The **MonitoredShop** security system can, in many cases, be installed with no capital outlay and is designed to provide so much more than just security; there are a variety of sensors which expand the systems detection and reporting abilities to cover smoke, gas, C02 and flood as well as its incredible lone worker assistance functionality which now comes as standard with all Monitored Shop installations.

Lone Worker Support

A very exciting feature of the **MonitoredShop** security system is the lone worker support facility which enables users to initiate a silent activation and open the audio connection to the alarm receiving centre.

The system can be programmed to offer silent, discrete or full bells activations or, with additional activators, a combination of all three. The Alarm Receiving Centre (ARC) are able to differentiate between activators which means that the response mechanism offered can be tailored to the specific needs of your organisation dependant on how the system is triggered.

When the system is activated an audio link is opened between the ARC operator and the systems control panel enabling voice communications directly between the two. The operator is able to listen and speak or to listen discretely to assess the situation.

The available responses can be further refined with the introduction of passwords; the use of a duress password would indicate to the operator that the situation requires response escalation and a stand down password would indicate that all is well.

This feature has proven to be very popular with customers that find themselves in a situation where they are alone with a visitor or customer which, whilst not dangerous, still makes them feel uncomfortable. Simply having the ability to press a button and hear a friendly voice adds a level of comfort that couldn't be gained in any other way; it also sends a clear message to the visitor or customer that both the premises and the lone worker are protected.

Supply chain accreditations

Control Panel
The central processing unit is fully equipped with an onboard keypad, 110db sounder, simplex 2 way voice communication, digital communicator and easy to follow voice menus for local and remote operations

Flood Detector
Detects and reports build ups of fluid as an early warning of flood or process overflow

Door & Window Contacts
Detects the opening of the door or window to which it is attached

4 Button Fobs
Remote Setting & Un-setting Fob with integral Lone Worker activator

Gas & C0 Detectors
Wide range of gas and carbon monoxide detectors available

Smoke Detectors
Local audible & remote reporting smoke optical technology smoke detector with brigade response

Movement Detectors
Detects a combination of heat and movement within its 25 metre range
